REQUEST FOR A CERTIFICATE OF CORRECTION UNDER 37 CFR 1.322

S I R:

The Patentee's Assignee hereby requests the Commissioner to issue a Certificate of Correction pursuant to 35 U.S.C. 254 to correct the following mistakes in the above-identified patent which resulted through the USPTO error.

Please amend column 4, lines 60-62 as follows:

Class **F 235** is dependent on class **G 240** and class **H 245** which is, in turn, dependent on class **I [[1]]250**.

Please amend column 6, lines 17-24 as follows:

Class **H 245** is dependent on class **I [[1]]250** and therefore a request to load class **I [[1]]250** is generated, and the class loader pushes class **I [[1]]250** onto stack **300** (stage **314**). Class **I 250** is not dependent on any other classes, therefore the class loader may load class **I [[1]]250** and then pop class **I 250** off of stack **300** (stage **315**). Since class **I [[1]]250** has been loaded the class loader may then load class **H 245** and pop class **H 245** off of stack **300** (stage **316**).

Please amend claim 13 as follows:

The system according to claim **11**, wherein, when the software component in the load request is dependent on an additional software component, an additional load request for the additional software component is received by the loader and the loader pushes a representation of the additional software component onto the stack when the additional load request is received and pops the representation of the additional software component off of the stack when the additional load request has been successfully fulfilled.

Please amend claim 24 as follows:

The system according to claim ~~[[23]]~~20, wherein the load request is received via a uniform resource locator.

Respectfully submitted,

Dated: 6/13/05
